

The operating system for modern commerce.

One ecosystem that lets any seller run their entire business — storefront, POS, warehouse, logistics, finance and growth — while millions of customers shop, order and pay in a single app.

• 12+ integrated products

• iOS · Android · Web

• Built for scale

One platform. The whole business.

02 / 22

Axentis Market is a full-stack commerce ecosystem. For customers it is a fast, personalized marketplace. For sellers it is a complete operating system — point-of-sale, digital warehouse, order & delivery management, finance, marketing and analytics — all sharing one real-time data core.

Unlike a classic marketplace that stops at the checkout, Axentis runs the seller's **entire back office**. The same code powers the mobile apps and the web storefront, so every surface stays perfectly in sync.

— WHY IT MATTERS

- ✓ Sellers replace 5–6 disconnected tools with one system
- ✓ Every transaction feeds a live analytics & profit engine
- ✓ Multiple revenue streams from a single relationship

12+

Integrated products in one ecosystem

Distinct monetization streams

POSITIONING

Shopify × Marketplace × POS — localized for emerging markets.

A digital commerce wave, still early.

Emerging markets are leapfrogging straight to mobile commerce. Smartphone penetration is high, card & wallet payments are accelerating, and small and mid-sized sellers still run on paper, spreadsheets and messaging apps. The infrastructure layer is wide open.

Double-digit e-commerce growth
Region compounding well above global average

Mobile-first buyers
Purchases happen in-app, not on desktop

Under-digitized sellers
The majority still lack any real back-office software

— OPPORTUNITY SIZING — ILLUSTRATIVE

TAM · Total retail spend **\$40B+**

SAM · Digitizable SMB commerce **\$6B**

SOM · 5-year serviceable target **\$450M**

SMB sellers

70%+

Smartphone reach

Figures are directional estimates for scenario planning, not audited market data.

Commerce is fragmented and manual.

04 / 22

Today a seller stitches together a chat storefront, a paper ledger, a separate POS, a courier's phone number and a spreadsheet. Nothing talks to anything. Customers feel it too.

Tool sprawl

Sellers juggle 5–6 disconnected apps for sales, stock, delivery and money. Data never reconciles.

Paper accounting

Profit, debts and expenses live in notebooks. Owners rarely know their true margin.

Blind inventory

No live stock counts means overselling, dead stock and missed reorders.

Chaotic delivery

Orders coordinated by phone. No tracking, no courier accountability, no proof of delivery.

Hard to be found

Small sellers have no discovery channel and no way to reach nearby customers.

No growth engine

Discounts, promos and loyalty are ad-hoc. There's no data to market intelligently.

One ecosystem replaces the whole stack.

05 / 22

Axentis collapses the fragmented toolset into a single, integrated platform. A customer app, a seller operating system and a marketplace control tower — all on one shared, real-time database.

— FROM → TO

- | | | |
|---------------------|---|---------------------------------|
| Six scattered apps | → | One login |
| Paper ledgers | → | Live profit engine |
| Phone-call delivery | → | Tracked courier system |
| Invisible to buyers | → | Personalized marketplace |

Customer app

Personalized feed, search, cart, checkout, tracking — one identical experience on iOS, Android and web.

Seller OS

POS, warehouse, orders, finance, marketing and analytics in a single dashboard and mobile app.

Control tower

Marketplace admin for companies, catalog, couriers, regions, payouts, moderation and platform analytics.

Shared data core

One PostgreSQL source of truth. Every action is instantly reflected everywhere, in real time.

Twelve products. One core.

06 / 22

Each product is a full module on its own — together they form a compounding system where every part makes the others more valuable.

Integrations

FCM Push Eskiz SMS
Telegram Printer / POS

Trust engineered into every layer.

16 / 22

Authentication

Phone + password or SMS one-time codes. Codes are hashed (HMAC-SHA256), expire in 5 min, capped attempts & sends.

Authorization

JWT middleware attaches role, company and phone to every request. Scoped access; PIN-locked panel sections.

Encryption

TLS in transit via Nginx; passwords hashed with bcrypt; secrets kept out of source, injected at runtime.

Backups

A single Postgres source of truth with routine backups and migration-driven, reproducible schema.

Audit Logs

Sensitive admin and finance actions are traceable; a dedicated security center surfaces platform activity.

Fraud Detection

Rate-limited auth per IP, abuse thresholds on OTP, and complaint/moderation workflows for bad actors.

✓ GIN release mode in prod

✓ CORS allow-list

✓ Parameterized SQL — no injection

✓ Startup secret checks

Thousands of companies. Millions of users.

17 / 22

A stateless Go API scales horizontally behind Nginx; the storefront is served as static, CDN-friendly assets; heavy media lives in object storage. The architecture grows by adding instances — not rewrites.

Stateless API instances

Scale out horizontally on demand

Static-first storefront

Cacheable, edge-deliverable, fast everywhere

Indexed Postgres core

Connection pooling · read scaling ready

— DESIGNED TO ABSORB GROWTH

Uptime objective

<100ms

Typical API response target

The same codebase powering one store powers ten thousand — multi-tenant from day one, with per-company data scoping enforced in the API layer.

Why Axentis wins.

- ✓ **Full stack, not just a storefront**
Competitors sell either a marketplace *or* a POS. Axentis is both — plus warehouse, finance and marketing.
- ✓ **One codebase, every surface**
Mobile and web share code — faster shipping, zero drift, lower cost to maintain.
- ✓ **Localized for the market**
SMS + Telegram OTP, private-store mode, referral agents — built for how business is actually done here.
- ✓ **Data-driven flywheel**
Every order sharpens personalization, forecasting and ad targeting — a moat that compounds.

CAPABILITY	AXENTIS	TYPICAL
Marketplace	✓	✓
Integrated POS & warehouse	✓	—
Live profit & finance	✓	—
Built-in courier system	✓	Partial
AI advisor & forecasting	✓	—

Already real, already live.

19 / 22

This is not a concept deck. The platform is built and shipping — a working backend, live apps, and a continuously expanding feature set.

Live apps — iOS, Android, Web

12+

Integrated products shipped

50+

Seller-facing features

CI

Automated build on every push

Barcode POS & offline mode

Sellers ring up sales with a scanner — even without a connection — and sync when back online.

AI purchase advisor

Recommends what to restock and when, from real sales velocity and stock levels.

Private-store mode

A dedicated app variant lets closed B2B sellers run an invite-only catalog — a whole new segment.

Win a city, then a country, then a region.

20 / 22

Referral-agent network

A built-in agent program recruits and onboards sellers — distribution baked into the product.

Seller-led growth

Every seller brings their own customers; every customer discovers new sellers. Two-sided flywheel.

Region-by-region rollout

Delivery zones and regional catalogs let the platform saturate one area before opening the next.

— EXPANSION PATH

1

City density

Dominate one market end-to-end

2

National coverage

Roll out region by region across Uzbekistan

3

Central Asia

Replicate the playbook across the region

A clear path, phase by phase.

21 / 22

PHASE 1 · FOUNDATION

Live & shipping

- ✓ Marketplace + seller OS
- ✓ POS, warehouse, finance
- ✓ Courier & orders

PHASE 2 · SCALE

Density & payments

- In-app payment rails
- Seller acquisition engine
- Loyalty & ad marketplace

PHASE 3 · INTELLIGENCE

AI & fintech

- Demand forecasting at scale
- Working-capital lending
- Automated marketing

PHASE 4 · EXPANSION

Cross-border

- Regional markets
- Multi-currency & language
- Platform & open API

— THE VISION

From a national marketplace to a regional commerce backbone.

Axentis Market already runs the full commerce loop — discovery, sale, delivery, money and growth — on one platform. The same engine that digitizes a single seller can digitize an entire economy. We are building the default operating system for commerce in emerging markets.

• National scale

• Enterprise-ready

• Internationally repeatable
